Steer Grill

Owner's Manual

SKU# 69008 LIQUID PROPANE (LP)

SKU# 69009 NATURAL GAS (NG)

**USA
EDITION**

Important Safety Warnings

This appliance is FOR OUTDOOR USE ONLY. This appliance must not be used in a building, garage, or any other enclosed area.

WARNING: This appliance is not intended to be installed in or on a boat or recreational vehicle.

WARNING: Ensure that your grill is properly installed, assembled, and maintained. Failure to adhere to these accompanying instructions may result in fire or explosion, causing serious bodily injury or death, and/or property damage.

DANGER

If you smell gas:

- **Shut off gas to the appliance.**
- **Extinguish any open flame.**
- **Open Lid.**
- **If odor continues, keep away from the appliance and immediately call your gas supplier or your fire department.**

WARNING

- **Do not store or use gasoline or other flammable liquids or vapors in the vicinity of this or any other appliance.**
- **An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.**

 **WARNING:** This product may expose you to chemicals including lead which is known to the State of California to cause birth defects or other reproductive harm.
For more information, visit: www.P65Warnings.ca.gov

IMPORTANT: Installation of this appliance must conform to local codes. In the absence of local codes, installation must conform to one of the following:

- ANSI Z223.1/NFPA 54
- CSA B149.1
- CSA B149.2

We care about your safety, so please...

Read and follow all warnings and instructions before assembling and cooking with your grill.

Retain this manual for future reference.

Service Information

Model Number:

☐ 69008 (LP)

☐ 69009 (NG)

Serial Number: _____

Date of Purchase: _____

Place of Purchase: _____

Fuel Type:

☐ Liquid Propane (LP)

☐ Natural Gas (NG)

Grill Operational Safety

WARNING: During use, and for some time afterwards, the grill will become and stay hot enough to cause serious burns. Do not leave children or pets unattended within the vicinity of the grill until it is no longer in use and has cooled completely. Never allow children to sit, stand, or play on or around the grill.

- Never allow children to operate the grill.
- Never lean over cooking surface while lighting grill.
- Never place objects or utensils on top of grill lid.
- Use barbecue tools with insulated handles and dry, good quality insulated oven mitts when operating the grill. Wet or damp mitts/gloves/pot holders may cause steam burns.
- Allow grill to cool completely prior to transporting or covering your grill for storage.
- Do not place grill under or on top of any surface that will burn.
- Do not allow obstructions or restriction of the flow of combustion and ventilation air around the grill housing.
- Do not build the grill into any combustible structure that is closer than 21 inches from the sides and back.
- Keep the vent openings of the cylinder enclosure, if applicable, free and clear from debris. Clean your grill only with the recommended cleaning agents.
- Keep the area encompassing your grill free and clear from any combustible materials, gasoline, and other flammable vapours and liquids.
- Do not operate this grill in temperatures below 0°F (-17°C).

Gas Conversion Kits:

Gas valves are preset at the Bull factory to operate on either LP gas or Natural Gas. If you wish to convert to a different gas type aside from LP or Natural Gas, be sure to contact your grill dealer, licensed plumber, or authorized service center for further details. Conversion kits will only be sold to professionals to perform conversion service. Failure to properly convert a unit can cause severe injury to yourself and/or others, irreparable damage to your grill and void your warranty.

INSECT ALERT: *Spiders and small insects occasionally spin webs or make nests inside the burners during warehousing, transit, and/or after long periods of non-use. These webs or nests can create a hazardous situation where gas flow is redirected and cause a fire type known as "FLASH BACK". This type of fire can cause serious damage to your grill and create an unsafe operating condition. Frequent inspections and care are recommended and detailed further on page 15.*

Liquid Propane (LP) Safety Guidelines

⚠ DANGER:

- Do not store a spare LP gas cylinder under or near this appliance.
- Never fill the cylinder beyond 80% full.
- If the information above is not followed exactly, a fire causing death or serious injury could occur.

To avoid risk of fire or explosion, please take these safety precautions:

- Never connect an unregulated LP gas cylinder to the grill.
- Do not subject LP gas cylinder to excessive heat.
- The LP gas cylinder must be constructed and marked in accordance with the *Specifications for LP gas Cylinders* of the U.S. Department of Transportation (DOT), or the standard for Cylinders, Spheres and Tubes for the Transportation of Dangerous Goods CAN/ CAS-B339.
- The LP gas cylinder must be provided with a listed overfilling prevention device.
- The LP gas cylinder must be provided with a cylinder connection device compatible with the connection for outdoor cooking appliances.
- Never use an LP gas cylinder that is visibly damaged, dented, or rusty.
- The LP gas cylinder must include a collar to protect the cylinder valve from damage.
- Ensure the LP gas cylinder has appropriate vapor withdrawal.
- Avoid unnecessary twisting of the hose.
- Prior to each use, visually inspect the LP hose for cuts, cracks, excessive wear or damage.
- The supplied pressure regulator and hose assembly (Bull part# 16589) must be used. Replacement pressure regulator and hose assemblies must be the type specified by Bull Outdoor Products.

When the appliance is not in use:

- The gas shall be turned off at the supply cylinder.
- The grill may be stored indoors if and only if the cylinder is disconnected and removed from the grill.
- The LP cylinders shall be stored outdoors out of reach of children and shall not be stored in a building, garage, or any other enclosed area.

Liquid Propane (LP) Gas Requirements

Your propane gas grill (SKU# 69008) is designed to operate on propane gas only. Each grill is shipped with an LP regulator hose assembly.

Connection to the Grill: The LP regulator hose assembly connects to the grill through a stainless steel flex tube via provided 3/8" flare union adapter*.

*3/8" refers to the tube outside diameter, *not* thread size.

Cylinder Size: This grill was designed for use with a standard 20lb (5 gallon) LP gas tank with a Type 1 connection.

Inlet Pressure: The provided LP regulator hose assembly maintains an 11" W.C. pressure at the inlet.

Cylinder Retention: Integral retention of the LP gas cylinder is required to limit movement of the cylinder. Bull offers many options to satisfy this requirement.

- For built-in applications, SKU# 16674 can be utilized and is shown below.
- For installation in a Bull Grill Cart, SKU# 69500, an integrated retention system is provided standard.
- Never mount the cylinder in an orientation such that the pressure relief valve is pointed towards the normal operating position of the user.

Bull 16674 LP gas cylinder retention system secured to enclosure with:

- 8x Screws
- 8x Washers
- 8x Locknuts

Bull 16674 LP gas cylinder retention bolt.

To secure cylinder:

- Turn clockwise

To remove cylinder:

- Turn counterclockwise

Natural Gas (NG) Requirements

Your natural gas grill (SKU# 69009) is designed to operate on natural gas only. Each grill is shipped with an NG regulator fastened to the interior side panel of the grill.

Connection to the Grill: The NG regulator is shipped pre-assembled with two 3/8 NPT to 3/8" Flare* adapters (one at inlet and one at outlet).

- The provided stainless steel flex hose connects the grill to the outlet of the regulator.
- An additional stainless flex hose with a 3/8" Female Flare* connection (not provided by Bull) is required to be connected to the regulator and adapter.
- This installer-supplied hose must be connected to an installer-supplied safety shut-off valve located and installed per local codes, or if in areas bereft of local codes, in accordance with ANSI Z223.1/NFPA 54 or CSA B149.1.
- All installer-supplied components for connecting the grill to a fixed fuel piping system such as rigid pipe, semi-rigid tubing, and/or connectors must comply with ANSI Z21.75 • CSA 6.27.
- Do not use Teflon® tape or pipe sealant on any flare ends. Doing so will not allow for a leak-free seal.
- Only use pipe sealing compound or pipe thread tape of the type resistant to the action of natural gas to at least the first three threads of all male pipe threads when making the connection.

*3/8" refers to the tube outside diameter, *not* thread size.

Inlet Pressure: The provided NG regulator maintains an 4" W.C. pressure at the outlet.

Pressure Testing: When pressure testing is performed:

- This grill, along with its individual shut-off valve, must be disconnected from the gas supply piping during any pressure testing of that system at test pressures in excess of 1/2 psi (3.5 kPa)
- This grill must be isolated from the gas supply piping system by closing its individual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.5 kPa).

Checking for Gas Leaks

When should I test for leaks?

A comprehensive leak test should be performed:

- After initial installation of the grill is complete, and before first using the grill.
- Periodically before (and throughout) the start of a new grilling season.
- For LP model grills, check each time an LP gas cylinder is connected to the grill.
- If you smell gas... however, recall the warning below! Turn off the gas to the grill, and ensure the odor does not linger before continuing with the leak test.

⚠ DANGER

If you smell gas:

- **Shut off gas to the appliance.**
- **Extinguish any open flame.**
- **Open Lid.**
- **If odor continues, keep away from the appliance and immediately call your gas supplier or your fire department.**

How do I perform a leak test?

- It is recommended to use a leak detection compound conforming to MIL-L-25567D. Alternatively, mix a 1:1 solution of liquid detergent and water into a spray bottle.
- **⚡ Never use an open flame to test for leaks.**
- Ensure all heat control valves are turned off and then turn on the gas supply.
- Apply the leak detection solution to all components of the gas delivery system, which consists of valves, connectors, piping, and hoses, at every point from the gas supply to the burners.
- Visual indicators of a failed test are any blowing bubbles present in the leak detection solution.
- Olfactory indicators of a failed test are any faint sulfurous smells present similar to that of rotten eggs.

IMPORTANT: Rectify any leaks immediately and do not use the grill until all connections have been checked and are leak-free.

LP Leak Test Detail

NG Leak Test Detail

★ Apply Solution at locations indicated by this symbol p. 8

Determining the Location of the Grill

This grill is for outdoor use only. An appliance is considered to be outdoors if:

- Installed with shelter no more inclusive than with walls on three sides, but with no overhead cover; all openings must be permanently open; sliding doors, garage doors, windows, or screened openings are not considered as permanent openings. **OR**
- Installed with shelter no more inclusive than within a partial enclosure that includes an overhead cover and no more than two sidewalls. The sidewalls may be parallel, as in a breezeway, or at right angles to each other; all openings must be permanently open; sliding doors, garage doors, windows, or screened openings are not considered as permanent openings. **OR**
- Installed with shelter no more inclusive than within a partial enclosure that includes an overhead cover and three sidewalls, as long as 30% or more of the horizontal periphery of the enclosure is permanently open. All openings must be permanently open; sliding doors, garage doors, windows, or screened openings are not considered as permanent openings.
- This appliance is not intended to be installed in or on a boat or recreational vehicle.

Clearance to Combustible Materials

For both, portable, and built-in grills:

- Maintain a distance of 21" from both sides and back of the grill to any combustible materials.

For built-in grills:

- If installed under overhead combustible construction, a suitable UL 710 approved heavy duty vent hood must be installed in conjunction with the grill.
- The vent hood must be placed in operation while the grill is being used.

For portable grills (such as those installed on carts):

- Under no circumstance is it permitted that the grill be used under any overhead combustible materials.

Grill Enclosure Requirements

When installing the grill for built-in applications, do not use any combustible materials for the grill enclosure construction.

LP Cylinder Enclosure Required Provisions:

For LP grill models (SKU# 69008), additional considerations must be made when constructing the enclosure:

- The grill enclosure must contain a separate, isolated enclosure for storage of the LP gas cylinder. The storage for the LP gas cylinder must be designed such that only the LP gas cylinder being used can fit in this compartment. It should not be physically possible to store a spare LP gas cylinder vertically, horizontally, or in any orientation within the enclosure when the LP gas cylinder currently in use is installed and properly retained.
- This separate enclosure for the LP gas cylinder shall isolate the cylinder from the burner compartment in order to provide:
 - ◇ Shielding from radiation
 - ◇ A flame barrier
 - ◇ Protection from foreign material, such as hot drippings
- There must be a minimum of 2 inches between the floor of the LP gas cylinder enclosure and the ground.
- The LP gas cylinder must be easily connected and disconnected, and connections shall be able to be tested outside the cylinder enclosure.
- Connections which could be disturbed when installing the cylinder must be accessible for leak testing inside of the enclosure.
- The LP gas cylinder enclosure must include some means of retention as detailed on page 6.

Required Enclosure Ventilation

Bull SKUs #65790 & 56830 are available to help satisfy requirements above

LP Cylinder Enclosure Ventilation:

⚠ WARNING: Failure to adequately ventilate your outdoor kitchen could result in an explosion or fire.

The enclosure for the LP gas cylinder shall be properly ventilated. The proper ventilation of the enclosure shall be accomplished by one of the following options:

1. One side of the enclosure shall be completely open.
2. For a cylinder enclosure having four sides, a top, and a bottom, and intended for installation in a built- in enclosure:
 - ◇ At least one ventilation opening shall be provided on the exposed exterior side of the enclosure located within 5 in (127mm) of the top of the enclosure and unobstructed. The opening(s) shall have a total free area of not less than 1 in²/lb (14.2 cm²/kg) of stored fuel capacity (20in² for a 20lb LP gas cylinder).
 - ◇ At least one ventilation opening shall be provided on the exposed, exterior side of the enclosure 1 in (25.4 mm) or less from the floor level and shall have a total free area of not less than 1/2 in²/lb (7.1 cm²/kg) of stored fuel capacity (10in² for a 20lb LP gas cylinder). The upper edge shall be no more than 5 in (127mm) above the floor level.
 - ◇ Every opening shall have a minimum dimension so as to permit the entrance of a 3/16 in (4.8mm) rod.

IMPORTANT: The requirements listed above are the MINIMUM. Bull recommends having ventilation openings on all exposed exterior sides at both top and bottom. The ventilation openings should be sized and located as outlined above.

Grill Counter top Cutout Dimensions:

Dimensions shown below are in inches and for use with non-combustible constructions only.

Lighting the Grill

Prior to lighting your grill, ensure you have become familiar with the safety guidelines and instructions presented in this manual thus far.

Never attempt to light your grill if you smell any odor resembling gas. Perform a leak test as prescribed in this document before proceeding.

Grill Standard Lighting Procedure:

1. Begin by confirming that all burner control valves are set to the "OFF" position.
2. Turn the supply gas on.
3. Push in the control knob of the burner you intend to light. Slowly, for roughly 3-4 seconds, rotate the knob counterclockwise by approximately a 1/4 turn. An audible *CLICK* should be heard. By the time the click is heard, the burner orifice should have provided enough gas to ignite and a visible flame should be present. **If the burner does not ignite, immediately return the control knob to the "OFF" position;** wait five minutes for any gas to disperse and repeat this process.
4. Adjust the control knob(s) to the desired cooking temperature.

Grill Manual Lighting Procedure:

If the ignitors fail to produce a spark at the electrode tip, the burners can be manually ignited using a long reach match and provided match holder. Alternatively, a long-necked lighter may be used.

Standard Burners:

1. Begin by confirming that all burner control valves are set to the "OFF" position.
2. Turn the supply gas on.
3. Use provided match holder, or long-necked lighter, placing the flame near to the burner ports.
4. Push in the control knob of the burner you intend to light. Slowly, for roughly 3-4 seconds, rotate the knob counterclockwise by approximately 1/4 turn. An audible *CLICK* should be heard. By the time the click is heard, the burner orifice should have provided enough gas to ignite. If the burner does not ignite, immediately return the control knob to the "OFF" position; wait five minutes for any gas to disperse and repeat this process.
5. Adjust the control knob(s) to the desired cooking temperature.

Match holder (SKU 97022)

Burner Flames

Each burner on your grill is preset by the factory for best performance. However, many factors such as variations in your gas supply, or dirty/clogged air shutters and/or orifices may cause your burners to not operate as intended.

- Flames should be blue and stable. Any yellow flame (excluding at the very tips) indicates insufficient air supply.
- Flames should be quiet. A noisy, lifting flame indicates excessive air supply.
- Flame heights should be approximately:
 - ◇ 1/4" on "LOW"
 - ◇ 1-3/4" on "HIGH"

Air Shutter Adjustment:

With the grease tray removed, the air shutters are easily adjustable.

Simply loosen the single screw present on each burner which secures the shutter to the burner and rotate the shutter as needed to correct the issues mentioned above.

- If too much air is being supplied (noisy, lifting flame), rotate the shutter to restrict the amount of air entering the burner.
- If too little air is being supplied (yellow/orange flame), rotate the shutter to allow for more air to enter the burner.
- Once adjustments have been made, tighten the screw back to prevent the shutter from shifting during operation.

Loosen screw to adjust shutter

Burner Maintenance

Proper maintenance of your grill burners will not only keep your burners in pristine shape, but also reduces the risk of flashbacks as described on page 4.

At least once a month, or when your grill has not been used for a prolonged period of time, it is imperative to inspect and clean your burners. To properly inspect and clean your burners, they should first be removed from the grill as instructed below.

If this is the first time you are disassembling your burners, you will need to remove four cotter pins before being able to take out the burners.

Before proceeding, always follow these instructions:

1. Do not attempt to remove burners during or immediately after use.
2. Allow the grill to cool completely before touching.
3. Always ensure the supply gas is turned off.
4. All the burner control knobs should be set to the "OFF" position.
5. Remove the grease tray, flame tamers, warming rack, and cooking grates.
6. Disconnect the flexible fuel line from the manifold. This line is behind the right side of the control panel and can be accessed from underneath the grill.

The procedure for removing the cotter pins is as follows:

- Locate the three cotter pins holding the burners in place towards the rear panel of the grill (hidden in the image to the right for clarity).
- Using long-nosed pliers, clamp onto the loop of the cotter pin and pull the cotter pin out.
- The cotter pins were only necessary for shipping/handling and are no longer necessary. They can be discarded or retained for future use.

For additional resources on removing these cotter pins, scan the QR code, or visit: <https://www.youtube.com/watch?v=yhUR5svLSA>

- With the internal components and cotter pins removed, lift the burner up and out of the hole.
- Slide the burner toward the rear of the grill to free the burner from the valve.
- Now that the burner is removed from the grill, they can be inspected and cleaned.

- Begin by inspecting the burner tube and all outlet ports, and verify they are damage free and clear of debris.
- Check for any signs of corrosion, cracks, or holes. If any such damage is identified, order and install a new burner before returning to service.
- Clean the burner(s) as detailed to the right.
- Once inspected and cleaned, re-install the burner(s) following the procedure outlined below.

Burner Installation

To install your burner after removal, simply reverse the steps outlined on the bottom of page 15.

- Slide the burner back onto the gas valve far enough to allow the burner retainer post to rest in the retaining hole where the cotter pins were installed previously.

- Verify that the burner tube is properly located with respect to the burner valve orifice as shown below.

WARNING: If the valve orifices do not fit inside the burner tubes, lighting the burners may cause an explosion and/or fire

INCORRECT POSITION
(NOTE GAP BETWEEN BURNER
TUBE AND BURNER ORIFICE)

CORRECT POSITION

Ignition System Inspection:

After re-installation of the burners is a good time to perform an inspection on your grill's ignitors. This is accomplished with the following procedure:

1. Ensure the supply gas to the grill is turned off.
2. Ensure all control knobs on the grill are set to the "OFF" position.
3. One-by-one, push in each control knob and slowly turn approximately 1/4 turn counterclockwise until an audible *CLICK* is heard. Prior to the click, look near the valve's ignitor orifice and be on the lookout for a blue spark at the electrode tip by the ignitor orifice.
4. Once the click is heard, determine if a blue spark was present. If not refer to page 18 for troubleshooting.

Cleaning the Grill

Your Grill's outstanding luster and durability is attributed to Stainless Steel construction. Stainless Steel has an outer layer that relies on a proper cleaning and maintenance routine as the best way to prevent corrosion. Please note, Stainless Steel is not 'rust proof' contrary to widespread belief. Grills are at higher risk of corrosion by exposure to chemicals, caustics and fertilizers from swimming pools and outdoor landscaping. Locations with climates with greater heat and humidity will intensify this condition. By following a proper cleaning routine, you will add to the years you enjoy your Bull grill.

Cooking Grates:

After cooking, turn control knobs to "OFF" and let grill cool before attempting to clean your cooking grids. Before first use and periodically it is suggested that you wash the cooking grids in a mild soap and warm water solution. You can use a washcloth or a vegetable brush to clean your cooking grids.

Flame Tamers & Heat Shields:

Washing the flame tamers & heat shields after every use is not necessary but periodically it is suggested you wash them in a soap and warm water solution. Use a wire brush to remove stubborn cooking residue. Dry the flame tamers & heat shields thoroughly before you reinstall it in the cooking insert.

Grease Tray:

The grease tray should be emptied and wiped down periodically and washed as needed.

Grill Housing:

Burning-off the grill after every cookout will keep it ready for instant use. However, periodically the grill should be cleaned thoroughly to ensure optimal performance. Bull recommends doing the following on an annual basis:

1. Shut off gas supply at source and disconnect fuel line from gas valve manifold. Protect fuel line fitting.
2. Remove and clean the cooking grates, flame tamers, heat shields, and burners.
3. Remove the warming rack and wash with mild detergent and warm water.
4. Cover the gas valve orifice with a piece of aluminum foil.
5. Brush the inside and bottom of the grill with a stiff wire brush and wash down with a mild soap and warm water solution. Rinse thoroughly and let dry.

IMPORTANT: Do not line the bottom of the grill housing with aluminum foil, sand, or any other grease absorbent substance. Grease will not be able to drip down into the grease collector as intended and a grease fire could occur. Bull offers a grease tray liner (SKU# 24268) for easy clean up and maintenance.

Troubleshooting

If your grill is not functioning properly, use this troubleshooting table below to diagnose and address your issue. If you are unable to remedy your problem, consult your grill dealer or gas appliance service person.

Issue	What to do
Grill Fails to Light	<ul style="list-style-type: none">• Turn off gas at supply-end, turn control knobs to the "OFF" position.• Check gas supply and all connections.• Wait five minutes.• Repeat standard lighting procedure on Page 13.• If issue still persists, check for potential causes below.
Obstruction in Gas Line	<ul style="list-style-type: none">• Disconnect fuel line from grill.• Open gas supply briefly to dislodge any obstructions from the fuel line.• Close off the supply line at the source and reconnect the supply to the grill.
Misaligned Ignitor	<ul style="list-style-type: none">• Check the position of the electrode tip on each burner valve. The tip of the electrode should be pointing forward toward the burner and free from grease where the spark discharges.• The ignition wire should be rigidly connected to the valve ignition and electrode.• Replace the ignition wire if broken or cracked.• Verify ignitor is working properly by following procedure outlined on Page 17.

Issue	What to do
<p>Plugged Burner Orifice</p>  <p>The diagram shows a burner assembly with a red ignitor wire. An orange arrow points to the 'Ignitor Orifice' at the end of the wire, and another orange arrow points to the 'Burner Orifice' on the burner head.</p>	<ul style="list-style-type: none"> • Remove burners following instructions starting on Page 15. • Remove the orifice located on the burner valve. • Gently clean with a fine wire to clear any obstruction that may be present. • Reinstall burner orifice. • Reinstall burners, properly seating over orifice as shown on Page 16. • Perform ignitor test (Page 17) to confirm it is working. • Replace cooking components and grease collectors before attempting to light the grill.
<p>Burner Flame is Yellow</p>	<ul style="list-style-type: none"> • The burner may have seasoning salts, oil film, or other foreign matter causing the discolored flame. Clean the burner with a wire brush and see if problem persists. • Air shutter on gas valve may need adjustment (Page 14). Increase air supplied to valve by opening the shutter.
<p>Burner Flame is Lifting/Noisy</p>	<ul style="list-style-type: none"> • Air shutter on gas valve may need adjustment (Page 14). Decrease air supplied to valve by closing shutter.
<p>Flashback</p>	<ul style="list-style-type: none"> • When a fire occurs in or around the burners, immediately turn off the gas supply. • Turn all control knobs to the "OFF" position. • Wait until the grill has cooled completely. • Remove the affected burner(s) following instructions on Page 15. • Clean the burner(s) as shown on Page 16.

IMPORTANT: During troubleshooting you may find re-ignition necessary. Do not re-light the grill while it is still hot. You must wait at least five minutes to allow accumulated gas to disperse.

Product Warranty and Registration

Thank you for choosing Bull Outdoor Products. To enable our commitment to your satisfaction, you will need to register your purchase for it to be covered under Bull's warranty policy. Please save your purchase receipt as it is required for warranty claims. Additionally, registering your purchase will allow Bull or your Bull Authorized Dealer to utilize the encoded information for the purpose of ordering replacement parts or additional accessories to ensure your purchase remains in optimal working condition. To validate your warranty, we offer two options as shown below:

Option 1: Online Registration

Registration can be completed on the Bull Customer Service Portal

Scan the QR code, or visit: <https://api.bullbbq.com/c/>

Option 2: Mail-in Registration

Complete the Product Warranty Registration Card located in the shipping box. A reference of the card is shown to the right.

Mail the completed card to:

BULL OUTDOOR PRODUCTS, INC.
15 East Ave, Athens, TN
Attn: Warranty Service Center

Scan This Code With Your Phone

Unpacking the Grill:

We have created a helpful video to show you how to unbox, install components, and more.

Scan the QR Code, or Go to <https://bullbbq.com/bull-support-videos/>

After opening the box, carefully inspect the contents for any damage. Contact our service center or local dealer for replacement of any damaged/missing parts. If damaged, do not attempt to install.

Ordering Replacement Parts:

Please refer to your owner's manual parts list and illustration(s) to identify what you need. Have your serial number ready. Replacement parts can be purchased via two options.

Option 1: Online

Scan the QR code, or visit:
<https://bullbbq.com/buy-parts>

Option 2: Phone

We have two authorized parts distributors ready to assist.
